

Disclaimer

Vera is a decentralized peer-to-peer protocol that people can use to create liquidity and perform various non-fungible (NFT) token business transactions. The current and future versions of Vera protocol is made up of free, public, open-source or source-available software including a set of smart contracts that are deployed on various blockchains. Your use of the Vera protocol involves various risks, including, but not limited to, losses while digital assets are being supplied to the Vera protocol and losses due to the fluctuation of prices of tokens in a trading pair or liquidity pool. Before using the Vera protocol, you should review the relevant documentation to make sure you understand how the Vera protocol works. Additionally, just as you can access email protocols such as SMTP through multiple email clients, you can access the Vera protocol through dozens of web or mobile interfaces. You are responsible for doing your own diligence on those interfaces to understand the fees and risks they present.

AS DESCRIBED IN THE VERA PROTOCOL LICENSES, THE VERA PROTOCOL IS PROVIDED "AS IS", AT YOUR OWN RISK, AND WITHOUT WARRANTIES OF ANY KIND. Although the team at Vera Protocol d/b/a/ "Vera Labs" developed much of the initial code for the Vera protocol, it does not provide, own, or control the Vera protocol, which is run by smart contracts deployed on the blockchain. Upgrades and modifications to the protocol are managed in a community-driven way by holders of the VERA governance token. No developer or entity involved in creating the Vera protocol will be liable for any claims or damages whatsoever associated with your use, inability to use, or your interaction with other users of, the Vera protocol, including any direct, indirect, incidental, special, exemplary, punitive or consequential damages, or loss of profits, cryptocurrencies, tokens, or anything else of value.
